

## PROFILE

I believe that always there are new things to learn, there is no limit you can reach.

So I'm always trying to find out and learn new things, I hope that what I do can help me in my career and improve my skills and it will.

I was walking in software development track, but few months I heard about machine learning and the power of machine learning, so I started to search and understand what machine learning is, then step by step started to learn and still learning about machine learning.

I wish I could improve myself, and pay back the favor to my parents who helps me a lot and support me along the way .
